

TecDoc Catalog API Documentation Summary

This document summarizes the **v2** endpoints exposed by the TecDoc Catalog API on RapidAPI. The API provides structured data about vehicle types, languages, countries, manufacturers, models, vehicles, parts (articles) and various cross-reference utilities. The information below is based on the user interface available on the RapidAPI documentation; some endpoints may have additional optional parameters that are not visible without an active API key.

Overview

The API base URL used in the examples is `https://tecdoc-catalog.p.rapidapi.com`. Requests must include the header `x-rapidapi-host: tecdoc-catalog.p.rapidapi.com` and an `X-RapidAPI-Key` (not shown in examples). Each endpoint is grouped by category.

Languages & Countries

These endpoints allow clients to list available languages and countries and to resolve language or country IDs:

Endpoint & Method	Path pattern (placeholders)	Key parameters
Get Languages (GET)	<code>/languages/list</code>	— returns all supported language IDs ¹ .
Get Countries (GET)	<code>/countries/list</code>	— returns the list of countries ² .
Language info by ID (GET)	<code>/languages/get-language/lang-id/{langId}</code>	<code>langId</code> – language identifier; returns details for a language ³ ⁴ .
List countries by language (GET)	<code>/countries/list-countries-by-lang-id/{langId}</code>	<code>langId</code> – language ID; returns available countries for that language ⁵ ⁶ .
Country info (GET)	<code>/countries/get-country/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	<code>langId</code> and <code>countryFilterId</code> – returns country description in a given language ⁷ ⁸ .

Manufacturers & Vehicle Types

This group provides vehicle type IDs and manufacturers per type:

Endpoint & Method	Path pattern	Parameters
List vehicle types (GET)	<code>/types/list-vehicles-type</code>	None – returns numeric IDs for vehicle categories (passenger car, commercial, etc.) ⁹ .
Manufacturers by type (GET)	<code>/manufacturers/list/type-id/{typeId}</code>	<code>typeId</code> – vehicle type ID; returns manufacturer IDs ¹⁰ ¹¹ .
Manufacturer details (GET)	<code>/manufacturers/find-by-id/{manufacturerId}</code>	<code>manufacturerId</code> – TecDoc manufacturer ID; returns name and other metadata ¹² ¹³ .

Models

Models belong to a manufacturer and vehicle type. Two endpoints provide model lists and details:

Endpoint & Method	Path pattern	Parameters
List models for a manufacturer (GET)	<code>/models/list/type-id/{typeId}/manufacturer-id/{manufacturerId}/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	Required: <code>typeId</code> , <code>manufacturerId</code> , <code>langId</code> , <code>countryFilterId</code> – returns all model IDs of a manufacturer ¹⁴ ¹⁵ .
Model details by model ID (GET)	<code>/models/type-id/{typeId}/model-id/{modelId}/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	<code>typeId</code> , <code>modelId</code> , <code>langId</code> , <code>countryFilterId</code> – returns descriptive info about a model ¹⁶ .
Model details by vehicle ID (GET)	<code>/models/type-id/{typeId}/vehicles/{vehicleId}/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	<code>typeId</code> , <code>vehicleId</code> , <code>langId</code> , <code>countryFilterId</code> – resolves a model using a vehicle ID ¹⁷ .

Vehicles

The vehicle-level endpoints expose engine and vehicle information and utilities for searching by various national identifiers:

Endpoint & Method	Path pattern	Description / Parameters
Vehicle info (GET)	<code>/types/type-id/{typeId}/vehicle-type-details/{vehicleId}/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	Parameters: <code>typeId</code> , <code>vehicleId</code> , <code>langId</code> , <code>countryFilterId</code> – returns details for a vehicle ID ¹⁸ .

Endpoint & Method	Path pattern	Description / Parameters
Engine types by model (GET)	<code>/types/type-id/{typeId}/list-vehicles-types/{modelId}/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	<code>typeId</code> , <code>modelId</code> , <code>langId</code> , <code>countryFilterId</code> – lists available engine IDs for a given model ¹⁹ .
Engine details (GET)	<code>/engines/engine-details/engine-id/{engineId}/lang-id/{langId}</code>	<code>engineId</code> , <code>langId</code> – returns engine displacement, fuel type, and other specifications ²⁰ .
Vehicle IDs by model (GET)	<code>/types/type-id/{typeId}/list-vehicles-id/{modelId}/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	<code>typeId</code> , <code>modelId</code> , <code>langId</code> , <code>countryFilterId</code> – returns all vehicle IDs within a model ²¹ .
Vehicles by national identifier (GET)	<code>/types/searching-the-passenger-car-by-ltn-number/lang-id/{langId}/country-filter-id/{countryFilterId}/ltn-number/{ltnNumber}/number-type/{numberType}</code>	<code>langId</code> , <code>countryFilterId</code> , <code>ltnNumber</code> , <code>numberType</code> – searches passenger cars by national numbers. For example: KBA numbers in Germany (<code>numberType=1</code>) ²² , or Dutch license plates (<code>numberType=2</code>) ²³ .
Part criteria for vehicle (GET)	<code>/articles/selection-of-the-criteria-for-articles-and-vehicle/type-id/{typeId}/product-id/{productId}/vehicle-id/{vehicleId}/supplier-id/{supplierId}/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	Returns available criteria to filter parts for a given vehicle/product; requires <code>typeId</code> , <code>productId</code> , <code>vehicleId</code> , <code>supplierId</code> , <code>langId</code> , <code>countryFilterId</code> ²⁴ .

Parts & Articles

The parts (articles) endpoints represent the largest category, providing product categories, supplier lists, and search utilities. Only a subset is shown below because the RapidAPI UI restricts access without an API key.

Category and Supplier Utilities

Endpoint & Method	Path pattern	Notes
List all categories (GET)	<code>/category/type-id/{typeId}/list-category-tree-structure/lang-id/{langId}</code>	Returns a tree of product categories for a vehicle type ²⁵ .
List categories by vehicle (v2) (GET)	<code>/category/type-id/{typeId}/products-groups-variant-2/{vehicleId}/lang-id/{langId}</code>	Lists categories applicable to a specific vehicle ²⁶ .

Endpoint & Method	Path pattern	Notes
Search categories by text (GET)	<code>/category/search-for-the-commodity-group-tree-by-description/type-id/{typeId}/lang-id/{langId}/search-text/{searchText}</code>	Search categories containing the search term; parameters <code>typeId</code> , <code>langId</code> , <code>searchText</code> ²⁷ .
List all product names (GET)	<code>/category/list-products-names/lang-id/{langId}</code>	Returns the names of all products; requires <code>langId</code> ²⁸ .
List all suppliers (GET)	<code>/suppliers/list</code>	Returns all supplier IDs; no parameters ²⁹ .

Article search and cross-reference

These endpoints help find articles by article number or OEM (original equipment manufacturer) numbers and determine compatibility or equivalent items:

Endpoint & Method	Path pattern	Key fields
Search articles by article number (GET)	<code>/articles/search-by-article-no/lang-id/{langId}/article-no/{articleNo}</code>	<code>langId</code> , <code>articleNo</code> – returns article IDs and basic info ³⁰ .
Search articles by article number (v2) (GET)	<code>/artlookup/search-articles-by-article-no/lang-id/{langId}/article-type/{articleType}/article-no/{articleNo}</code>	Adds an <code>articleType</code> parameter (e.g., <code>IAMNumber</code> , <code>TradeNumber</code> , <code>OENumber</code>) to refine the search ³¹ .
Analog spare parts by article number (GET)	<code>/artlookup/search-for-analog-spare-parts-by-the-articles-numbers/lang-id/{langId}/articleNo/{articleNo}</code>	Finds interchangeable parts for a given article number ³² .
Cross-references by article number (GET)	<code>/artlookup/search-for-cross-references-through-oem-numbers/article-no/{articleNo}/supplierName/{supplierName}</code>	Returns OEM cross references for an article; <code>supplierName</code> is optional ³³ .
Search articles by OEM number (GET)	<code>/articles-oem/search-by-article-oem-no/lang-id/{langId}/article-oem-no/{articleOemNo}</code>	<code>langId</code> , <code>articleOemNo</code> – returns articles where the given OEM number matches ³⁴ .

Endpoint & Method	Path pattern	Key fields
Search articles by OEM number (POST)	<code>/articles-oem/article-oem-search-no</code>	Form-data body: <code>langId</code> , <code>articleOemNo</code> – performs the same search using POST.
Equivalent OEM numbers (GET)	<code>/articles-oem/search-all-equal-oem-no/lang-id/{langId}/article-oem-no/{articleOemNo}</code>	Returns alternative OEM numbers for a given OEM number; parameters <code>langId</code> and <code>articleOemNo</code> ³⁵ .
Equivalent OEM numbers (POST)	<code>/articles-oem/all-equal-oem-no</code>	Accepts query parameters <code>langId</code> and <code>articleOemSearchNo</code> or form data fields <code>langId</code> , <code>articleOemNo</code> ³⁶ .
OEM/OEM cross-reference through aftermarket parts (GET)	<code>/artlookup/search-for-the-oem-cross-references-through-aftermarket-parts-references/article-oem-no/{articleOemNo}</code>	Finds cross references for an OEM number through aftermarket part references; path parameter <code>articleOemNo</code> ³⁷ .

Vehicle compatibility by article number

Endpoint & Method	Path pattern	Description
Compatible vehicles by article number (GET)	<code>/articles/vehicles/type-id/{typeId}/article-no/{articleNo}/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	Determines which vehicles can use a particular article number (requires vehicle type and country filter) ³⁸ .
Compatible vehicles by article number & supplier ID (GET/POST)	<code>/articles/vehicles/type-id/{typeId}/article-no/{articleNo}/supplier-id/{supplierId}/lang-id/{langId}/country-filter-id/{countryFilterId}</code>	Adds <code>supplierId</code> to narrow results ³⁹ . A POST variant accepts the same fields in the body.

Additional parts endpoints

The API exposes many more endpoints for diagrams, media, accessories and cross references based on article ID or OEM numbers. The RapidAPI UI lists these endpoints but does not expose their details without authentication. Examples include:

- **Parts cross-reference by article ID** – returns cross references of an article ID.
- **OEM parts by vehicle ID** – lists OEM parts applicable to a vehicle.
- **List accessory parts by article ID** – returns accessories for a given article.
- **Vehicle spare-part criteria** – defines criteria to filter parts for a vehicle.
- **Parts diagram coordinates** – provides coordinates for graphical representation of parts.
- **Article media** – retrieves images or media for an article.
- **Article list by vehicle & category** – returns articles within a specific product category for a given vehicle.

Because the UI restricts access, details of these endpoints (exact path patterns and parameters) are not available in this summary.

Usage notes

- **Authentication:** All requests must include a valid RapidAPI key in the `x-rapidapi-key` header. Without it, the base URL returns an error message that the API key is invalid ⁴⁰.
- **Language & country filtering:** Many endpoints require both `langId` and `countryFilterId`. The API uses numeric IDs; for example, `langId=4` corresponds to English and `countryFilterId=63` corresponds to the Netherlands.
- **Searching by national identifiers:** The `numberType` parameter distinguishes between German KBA numbers (¹) and Dutch license plate numbers (²) when searching vehicles ²² ²³.
- **POST vs GET:** Some functions (e.g., searching by OEM number or retrieving equivalent OEM numbers) provide both GET and POST variants. The POST versions accept form data rather than path parameters and may be useful when the search values contain characters that need encoding.

Conclusion

The TecDoc Catalog API offers a rich set of endpoints for retrieving structured automotive data. This summary captures the major categories and endpoints available via the RapidAPI documentation. For full integration and advanced endpoints (such as part diagrams, media and accessory links), an authenticated API key is required to access more details.
